EMC Design Techniques for Switch-Mode and PWM Power Converters and Inverters (0.5-day course)
EMC Design Techniques for Switch-Mode and PWM Power Converters and Inverters

A Half-day Training Course

by

EurIng Keith Armstrong
Cherry Clough Consultants, U.K.

Synopsis
Training for engineers and managers in the use of good EMC design and manufacturing practices for switch-mode and pulse-width-modulation (PWM) power converters (AC-DC); power inverters (DC-AC); and DC-DC power converters; suitable for use in modern products and equipment.

Objective
To provide practical grounding in the EMC techniques now required for switch-mode and PWM circuits, to help companies quickly improve their commercial and financial performance by:

• Bringing advanced products to market more quickly
• Reducing unit manufacturing costs
• Reducing warranty costs and costs of ownership by improving reliability
• Easily complying with legal EMC requirements
• Reducing financial risks and improving Return On Investment
**Who Should Attend**

All electronic designers and their managers who are involved with switch-mode and PWM circuits, in all industry areas, including:

- Automotive       Medical & healthcare
- Consumer         Household (domestic) appliances
- Information Technology (IT) Industrial instrumentation or control
- Railway           Marine
- Aerospace         Military
- Telecommunications Radiocommunications

**Prerequisites**

Familiarity with circuit (hardware) design, PCBs/PWBs and electronic assembly and interconnection techniques.

Plain English is used, with a small amount of very easy mathematics.

**Course Methodology**

This course is presented classroom style using a PowerPoint slideshow containing practical illustrations of the techniques to aid understanding.

Case studies that are relevant to the trainees will be included verbally.

Each attendee will be presented with a bound copy of the PowerPoint slides used during the training, printed at 6 slides per page. The spaces around the slides usually suffice for taking extra notes.

Copies of the textbook “EMC for Printed Circuit Boards, basic and advanced design and layout techniques”, Armstrong/Nutwood January 2007, ISBN: 978-0-95555118-0-6 (spiral bound to lie flat when open) or 978-0-9555118-1-3 (perfect bound), can be provided at extra cost.

**Course Duration**

Half (½) day, for example: 9:00am – 12:30 pm; or 1:30pm – 5:00pm

This is a very intensive course with a very large amount of practical detail. If presented as an in-house course it can be very usefully combined with individual consultancy for each engineer or manager, to help him or her apply the material to his or her current projects.

In countries where English is not the first language, a longer duration may be preferred.
Venue and Date
To be decided.

The course could be provided as a public course, or as an in-house course. As an in-house course, it has the added value of allowing confidential discussions on how best to apply the material to particular projects or products.

COURSE OUTLINE

DAY 1 (half day)
Introduction: only power converter RF emissions are covered

AC-DC converters…
- The example circuit
- Circuit topology issues
- Spread-spectrum techniques
- Snubbers
- Rectifier noise
- Intrinsic body-drain diodes
- Using an output inductor
- Isolating transformer interwinding capacitance
- Capacitor ESR and ESL
- Reducing emissions from heatsinks
- Self-oscillation
- Beating and intermodulation
- Stability and decoupling
- Standby modes of operation
- PCB design and layout
- Wiring issues
- Some other design issues

DC-DC converters…
- Comparison with the AC-DC EMC design issues
- 0V noise emissions
- Power bus noise emission

DC-AC PWM converters (inverters, Class D, etc.)…
- PWM output waveform noise
- Shielding the output
- Filtering the output
- Suppressing the DC Link
- Other DC-AC emissions issues
- Some useful references
Course Instructor

EurIng Keith Armstrong C.Eng, FIET, ACGI, MIEEE, BSc(Hons)
Partner and Principal Consultant for Cherry Clough Consultants
www.cherryclough.com, tel/fax: +44 (0)1785 660 247,
email: keith.armstrong@cherryclough.com

EDUCATION/CERTIFICATION
Bachelor of Science (BSc) with Honours, Upper Second Class, Electrical Engineering, Imperial College of Science and Technology, London, U.K. 1972.
Associate of the City and Guilds Institute (ACGI), London, U.K., 1972
Member of the Institution of Electrical Engineers (MIEE) London, U.K. recently renamed as The Institution of Engineering and Technology (IET), since 1977. Appointed Fellow (FIET) in 2010.
Appointed as Chartered Engineer (C.Eng) by the Council of Engineering Institutions, London, U.K., 1977
European Engineer (EurIng) Group 1 awarded by the European Federation of National Engineering Institutions (FEANI), 1988
Member of IEEE (USA) and IEEE EMC Society, MIEEE, 1998
Member of IEEE Product Safety Engineering Society (USA), 2004

PROFESSIONAL ACTIVITIES
President of the EMC Industry Association (www.emcia.org) 2008-date
Chair of IEE's Electromagnetic Compatibility (EMC) Professional Group (E2) 1997-1999
Chair of IET's Working Group on EMC and Functional Safety 1998-date
Member EMC Test Labs Association (EMCTLA) and its Working Group B 2001-date
Member of Technical Panel for IET's EMC Professional Network (PN) 2001-date
Member of Technical Panel for IET's Functional Safety PN 2003-date
UK Expert appointed to the maintenance team (MT15) for IEC 61000-1-2 (EMC & Functional safety) 2003-date
UK Expert appointed to the maintenance team (MT23) for IEC 60601-1-2 (Medical EMC) 2007-date

RECENT RELEVANT EXPERIENCE (1990-PRESENT)
Started Cherry Clough Consultants in 1990, currently one of the two Partners.
External lecturer for the Sensors and Electronic Instrumentation MSc course at the University of Manchester, teaching an IET-accredited module on practical EMC design techniques.
The services that Keith provides for Cherry Clough Consultants include:

- Product, system, and installation EMC and safety good practices for reliability and cost-effective regulatory compliance
- Assessment of electromagnetic environments
• Control plans, test plans, etc., for effective management of EMC and safety in projects of all sizes
• Company procedures for EMC and safety, for financial benefits and/or regulatory compliance
• Production / QA procedures for maintaining regulatory compliance in volume manufacture and custom engineering
• Testing and remedial work to meet EMC and safety standards
• Creation of EMC Directive Technical Construction Files and other compliance documentation
• Assessment of EMC Directive Technical Construction Files for a number of EMC Competent Bodies
• Education and training for designers and managers on cost-effective EMC and Safety techniques; and on “EMC for Functional Safety, high-reliability and legal metrology”
• Education and training for executives in EU compliance; liability; financial benefits of using good EMC techniques; and related marketing issues

The above services have been applied in the following areas (so far) – please note this is not a complete listing:

**Systems and installations:**

Machinery and manufacturing/process plant of all sizes
Robotics
Air traffic control towers  Computer and telecommunication rooms
Administration centres  Financial dealer rooms
Professional audio systems and installations (e.g. theatres, opera houses, recording studios)
Steel rolling mills  Hospitals
Hotels  Chemical and pharmaceutical processing plant
Nuclear processing plant  Bottling and canning lines
Road tunnel lighting schemes  Broadband-Over-Power-Line (BPL) systems
Synchrotrons (e.g. the Diamond Light Source, Harwell, Oxfordshire)
Railway systems  Mobile X-ray systems for shipping containers

**Products and items of equipment:**

Industrial instrumentation, control, and machinery of all sizes
Variable speed AC and DC motor drives from very small to 10MW
Automotive engine control units (ECUs) and other electronic subassemblies (ESAs)
Information technology equipment (ITE) e.g. computers, servers, RAID arrays
Personal Digital Assistants (PDAs) and other hand-held wireless-enabled computing devices
Marine equipment  Computers
Photocopiers  Digital Signal Processing
Datacommunications devices  Professional audio consoles and other equipment
Professional video projectors  Lighting
Telephones and telecommunications  Consumer electronics (TV, Hi-Fi, etc.)
Radiocommunications, cellphones and pagers
Lifts (elevators)  Domestic (household) appliances
Gambling machines  Gas boilers
Electricity meters  Electrical power generators (small scale)
Building electrical services equipment  Subsea oil and gas production equipment
Robots  Solar power converters
Military avionics  Medical equipment (various)
Microscope manipulators  Coin mechanisms
Security equipment  Mains-borne communications
Induction heating  Laser welding
Digital microwave radio  Variable-speed winch for a military submarine
PREVIOUS PROFESSIONAL EXPERIENCE (1982-1990)

Keith was mostly involved with the design and development of state-of-the-art capital equipment during the period 1968 to 1990. He has wide experience in electronic product design and project management in the UK, South Africa and France, after finishing graduate apprenticeship with Thorn Automation in 1973.

Technically, he started in analogue design in 1968; adding digital control of analogue circuits in 1978, and A/D and D/A conversion in 1980. Project and departmental management experience was gained from 1983 onwards, including teams of more than 20 engineers and scientists (this was for the Microwave division of Marconi Instruments Ltd, Stevenage, UK, 1983-1988).

BOOKS, PUBLICATIONS and PAPERS

**The First 500 ‘Banana Skins’**, Nutwood UK, 2007, 500 reports and anecdotes concerning EMI. Edited by Keith Armstrong.

Very useful for have a laugh at other’s mistakes, or frightening yourself with what could go wrong. A useful present for a boss that doesn’t believe EMC can cause very real engineering and financial problems. Read it at [www.theemcjournal.com](http://www.theemcjournal.com), or buy from pam@nutwood.eu.com (approximately £10) or via [http://www.emcacademy.org/books.asp](http://www.emcacademy.org/books.asp).

**The IET’s new (2008) Guide on EMC for Functional Safety**

Written by an IET Working Group chaired by Keith Armstrong, this book comprehensively describes a practical and cost-effective procedure to help to save lives and reduce injuries where electronics technologies are used in all safety-implicated products, systems and installations.

Keith has written and presented a great many papers for a wide range of symposia, conferences, colloquia, and seminars worldwide, including ERA, IEE, IET, IEEE EMC Society and IEEE Product Safety Engineering Society events. Too many to list here, please ask for further details.

He has also published a great many articles on EMC for publication in professional journals and trade magazines worldwide, including the following five annual series for the EMC Compliance Journal (visit [http://www.compliance-club.com/keith_armstrong.asp](http://www.compliance-club.com/keith_armstrong.asp)):

- “Designing for EMC” (6 parts 2006-8, updating the 1999 series)
- “EMC for Systems and Installations” (6 parts, 2000)
- “EMC Testing” (7 parts, 2001-2)
- "Advanced PCB Design for EMC" (8 parts, 2004-5)

Keith has written 17 informative booklets on electromagnetic phenomena, what they are, what causes them, how they cause interference, and how to test for them using IEC and EN standard methods, plus 5 booklets (so far) on EMC issues in Installations, for example: Power Quality, Good EMC Engineering Practices, Variable-Speed Drives, etc. They can all be downloaded for free from [www.reo.co.uk/knowledgebase](http://www.reo.co.uk/knowledgebase).

Member of the editorial advisory board for Compliance Engineering Magazine, 1998 - date.
Member of the editorial board for Interference Technology Magazine, 2007 - date.
