3 - Filtering for EMC - Updated July 2022

emc11ms v3.5

Helping you solve your EMC problems

By Keith Armstrong

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

Module 3: Filtering for EMC

Keith Armstrong CEng, FIEE/IET, Senior MIEEE, ACGI, Eurling (Gp1)

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

Good Electromagnetic (EM) Engineering...

- is cost-effective SI, PI and EMC engineering:
 well-proven to save time & money in all lifecycle stages,
 helping to increase profits & reduce financial risks...
- for PCBs, modules, sub-assemblies, devices, products, equipment, vehicles, sub-systems, systems, installations, etc., etc.; of any size, in all applications
see Module 1, especially 1.15 (also Webinar 1c) and 1.16 (also Webinar 1d)
- **This** Module contains many EM Engineering guidelines that should *also* be used as an initial design checklist
to De-Risk a project's EMC: any guideline that can't or won't be followed identifies a project EMC risk!
see Module 1, section 1.16 (also Webinar 1d)
- to adapt any λ -based design guidelines to different EMC standards, see *Module 1, section 1.18* *(also Webinar 1d)*

Contents

- 3.1 Filtering is not ‘black magic’**
- 3.2 How filters work**
- 3.3 The advantages of soft ferrites**
- 3.4 CM filtering**
- 3.5 Specifying filters**
- 3.6 Real-life problems with resonances, inductors, capacitors**
- 3.7 Earth leakage currents, safety, and component selection**
- 3.8 Filter construction, mounting, and cabling**
- 3.9 The synergy of filtering and shielding**
- 3.10 Some useful references**

3.0.3 Cherry Clough Consultants confidential training material 3 of 98

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

It is important to understand that *all* clocked digital devices suffer from ‘ground/power bounce’ that puts noises up to GHz on all their pins (even inputs) and therefore on all of the traces, test points, and planes connected to them

3.0.4 Cherry Clough Consultants confidential training material 4 of 98

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

3. Filtering for EMC

3.1

Filtering is not 'black magic'

3.1.1 Cherry Clough Consultants confidential training material 5 of 98

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

Filtering is not 'black magic'

- But in practice it is often necessary to try different options to find the most cost-effective filters
- Many textbooks on filter design available
 - so instead these slides describe issues that should be taken into account so filters will work properly
- The filters described here assumed to go at the boundary between inside / outside of a product
 - similar considerations apply to filters inside a product

3.1.2 Cherry Clough Consultants confidential training material 6 of 98

By Keith Armstrong

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

Examples of commercial/industrial power supply filters (from Schaffner)

Low-cost filtered IEC 60320 mains connectors

Single-phase mains chassis-mounting filters

High-cost, very high performance feedthrough filters

3.1.3 Cherry Clough Consultants confidential training material 7 of 98

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

Examples of military power supply filters (from MPE and Amphenol)

Amphenol

MPE

Typical Insertion Loss (dB)

Frequency (Hz)

Typical Insertion Loss (dB)

Typical Insertion Loss (dB)

3.1.4 Cherry Clough Consultants confidential training material 8 of 98

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

3. Filtering for EMC

3.2

How filters work

3.2.1 Cherry Clough Consultants confidential training material 9 of 98

emc11mswo v3.5 All relevant safety requirements must be applied, not necessarily covered by these slides CCC

How filters work

- **Filters create a discontinuity in the characteristic impedance...**
 - reflecting RF energy away from the protected circuit...
 - or absorbing it (converting it to heat)
- **R, L, or C can be used as filters on their own...**
 - but combining them gives better rejection
 - LC types can give better rejection than RC (providing they are matched to the source/load impedances)
- **Always use passive filters above 1MHz**
